

PIARM

DON'T WORRY, LET IT CARRY

safe **strong** **flexible**

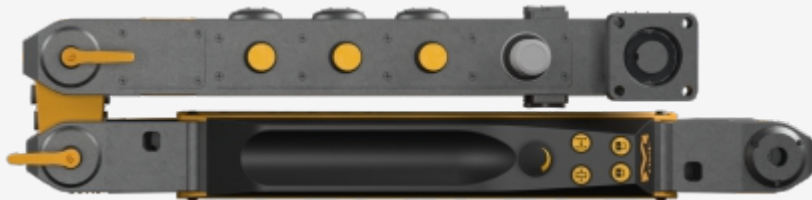

Piarm,

lightens the load with
the right combinations

So what does PIARM do?

This manually controlled manipulator facilitates the transportation of loads and can be modified with special gripping tools for various tasks. It enables the operator to manually move, balance, and adjust loads up to 90 kg in the desired direction without any strain. These features of the manipulator help the operator to manage tasks in an ergonomic and safe manner. Such features make it simpler and more efficient to use.

PIARM is capable of successfully carrying out challenging operations and tasks in different positions. The arms can be moved freely upwards, downwards, and sideways, enhancing the manipulator's reach and flexibility for diverse operations.
